

CAPABILITIES

WELDALL

The Big Picture

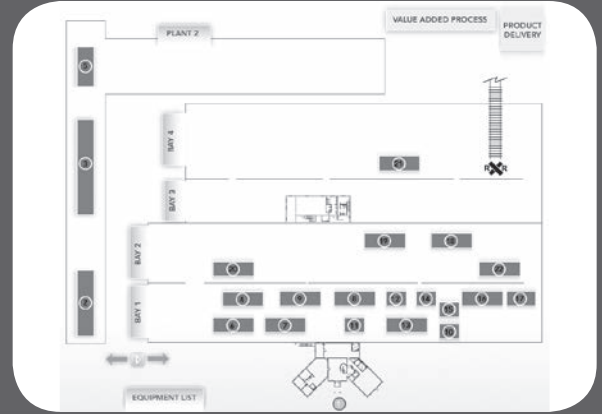

At Weldall, we specialize in large fabrications with plate thicknesses up to 10 inches and weight up to 400,000 pounds. Specialized equipment is needed to manipulate assemblies of extraordinary mass and we have it – lifting capacity stands at 200 Tons with 29 overhead and gantry cranes plus over 75 one-to-two ton jib cranes over work centers.

Within component production, we can cut, form, roll, drill, punch, and machine. There's obvious value in having both machining and welding operations under one roof; allowing us to offer a "Machine All" Advantage within the production process. In all, we have 10 work centers encompassing Machining, Plasma/Flame Cutting, Laser Cutting and Plasma Fabricating.

Our AWS D1.1 Certified Welders fit up and weld to spec per customer drawings with "In Process" and "Final" inspection by our team of AWS Certified Weld Inspectors (CWI). To complete the turnkey process, our assembly operations can handle hydraulic or pneumatic systems, process piping, insulating, electrical wiring, coatings and other value-added processes.

PLANT OVERVIEW

BAY 1	BAY 2	BAY 3	BAY 4	PLANT 2
