

QUALITY ASSURANCE/CONTINUOUS IMPROVEMENT

Raising The Bar

The quality of work consistently produced by Weldall is a standard to which we hold ourselves accountable. The critical nature of the products that we manufacture demands it. Our clients expect it. The world deserves it.

To assure our standards of quality, we maintain a 3rd party certification to ISO 9001:2008 standards and employ only AWS D1.1 certified welders. In addition, our Quality Department features 6 “in house” CWIs. Weldall has earned ASME code certificates for both “U” and “R” stamp requirements and succeeded in the rigorous process of achieving ISO 14001 certification.

We are able to deliver cost effectiveness along with quality as we actively incorporate the latest in Lean 5S & Six Sigma principles throughout our facility to improve efficiency in every process.

Shaping Our Future

Year after year, decade after decade, Weldall has shown a unique ability and willingness to be flexible in meeting varying customer requirements. Steps taken towards that effect include:

- Investing in new equipment to improve efficiency and cost effectiveness when those requirements are justified by long term business relationships.
- Expanding the facility and workforce to meet long term contract commitments.
- Collaboratively reviewing customer products for suggestions toward improving the manufacturability of the part without reducing the integrity required for the application.
- Constantly staying ahead of the curve of the latest in technology in all areas of our business. Whether it is for software and hardware to improve our Accounting, Production Planning, or Engineering capabilities, or the latest in spatial location equipment to improve our fit and weld efficiency, there is no hesitation in these types of investments in our future.
- Expanding our secondary process capabilities to increase overall control of scheduled part completion, reduce overall costs, and expand the ability to offer broader “turnkey” solutions to our partners.
- Researching and implementing new process standards to facilitate entry into new, technically specific, industries.

COMMUNITY SERVICE/ENVIRONMENTAL STEWARDSHIP

Supporting The Community

- Words can't possibly describe how important community involvement is to our owners—the Bahl family. What really expresses it best are the smiles on the faces of children and families who are touched by their generosity, caring and desire to help.
- The number of community groups and non-profit organizations Weldall supports is too lengthy to list here but can be found on our website.

Protecting The Environment

We want to make a difference not only in business but life as well. Therefore, we believe improving our environment is important to our employees, customers, suppliers, neighbors and community. To that end, Weldall:

1. Complies with applicable environmental regulations and other requirements;
2. Reduces waste and prevents pollution through continual improvement; and
3. Sets objectives and targets around significant environmental aspects and impacts.
